

**CSD Sealing Systems (NZ) Ltd  
Stand 8**

CSD Sealing Systems incorporates an extensive range of systems designed for sealing pipe and cable penetrations. Over the past 35 years each product and system has been specifically designed, to either surpass existing products, or provide a system that was not available.

Through this dedicated research and development, CSD has earned the position of being the “World’s undisputed N<sup>o</sup>1 passive fire penetration sealing system”.

Incorporated with the CSD systems is the Certified IDentification System, “CID International”

The CID International system eliminates the issues surrounding the lack of knowledge and understanding in critical sectors, like fire penetrations and others.

“CID” is a unique identification label that has matching / corresponding documents.

The label is placed either on the penetrating product or in the close vicinity of the penetration.

The matching documentation to this unique label references the CID system identifying the following:

- The building’s street address
- The details of the company performing the sealing system on the penetration
- The trained installer’s certified registration number
- The location on site of the penetration
- The fire rating of the penetration seal
- Tick boxes associated to the relevant information of the system used to seal the penetration
- Signature of the trained / certified installer.

This gives the relevant personnel & authorities' relevant information relating to each penetration or passive fire system that maybe required for compliance, future retro applications and / or maintenance.

Not only have the CSD systems been designed to perform at the highest level, but also for simplicity, ease & speed of application. This ensures the system to be accepted economically, with the ease of training and understanding that will reduce incorrect installation, and therefore ensure correct system performance.

CSD sealing systems is the most comprehensive and versatile system on the market, which has been proven in the harshest conditions and specified for the most demanding environments, unmatched others.

Our head office is located in Penrose, Auckland with trained installers, re-sellers and merchants around NZ.

Please feel free to visit us on stand number 8 at the BOINZ conference or contact Frank on (09)483 4000 or 027 407 0053.
