

Thermakraft Industries (NZ) Ltd
Stand 3

Thermakraft Industries (NZ) Ltd – now manufacture the latest in Roofing Underlays using Non Woven Polypropylene.

For 21 years Thermakraft has been the leading “light” in Synthetic Membranes such as our Wall Wraps - “Cover-Up, Watergate, and Diflex130”.

For years we persisted with paper based Underlays, but due to its organic nature, was affected with moisture and water saturation. Using bitumen this corrected the problem but created a fire hazard.

By using NO bitumen, NO kraft we created the most effective and innovated Roofing Underlay in New Zealand with: Durability, Absorption, Water resistance, Resistance against Movement (even during the most adverse conditions.)

Introducing the revolutionary CoverTEK range:-

CoverTEK 407 *Heavy Weight Self Support* and CoverTEK 403 *Standard Weight* are user friendly offering tensile unavailable in any other roofing product.

Thermakraft once again – Setting the Standards for Innovation and Development in Synthetic Membranes

INTELLIGENT MEMBRANES FOR THE BUILDING INDUSTRY
