

WEATHERTIGHT CONCRETE CONSTRUCTION COURSE

Registration Form

WELLINGTON, 16 November 2017

Following on from the successful collaboration between CCANZ and the Building Officials Institute of New Zealand (BOINZ) in delivering the 2014 concrete masonry course based on NZS 4229, a one-day course on weathertight concrete construction will be offered on Thursday, 16 November 2017.

COURSE SUMMARY

Trainees will achieve an understanding of the requirements of weathertight concrete and concrete masonry construction based on the CCANZ publication *Code of Practice for Weathertight Concrete and Concrete Masonry Construction (CP 01:2014)*.

The course also covers the theory that underpins the policies and practice of being a Building Control Officer (BCO) which is one component of the learning requirements for the Diploma in Building Control Surveying - Small Buildings.

The course is BOINZ standards-based, which means that trainees must attain a pre-determined level of theory-based knowledge and practical skills and be able to competently apply this knowledge in a practical situation, either in the workplace or in a simulated situation.

A standards-based course also enables trainees, who don't achieve competence in the theory exam, to be offered the opportunity to undertake further training to strengthen areas of weakness and to be reassessed in those areas.

The course includes:

- Tutor presentation
- Tutor-led activities, group-work & discussion
- Student learning resources
- Assessment activities

To complete the course participants will be required to:

- Actively participate in all sessions
- Work in teams to complete some exercises
- Individually complete (and pass) the Final Assessment
- Provide feedback/evaluation of the course

COURSE CONTENT

The course contains eight modules which align with the structure of CP 01. A summary of the role of the *New Zealand Building Act* and *New Zealand Building Code* will be given at the beginning of the course.

Module 1 - Scope

- Geometry
- Loads
- Construction excluded

Module 2 - General

- Materials
- Cracking
- Maintenance

Module 3 - Wall Construction

- Concrete masonry wall construction
- In-situ concrete wall construction
- Precast concrete wall construction

Module 4 - Wall Weathertightness Systems

- EIFS system - external insulation
- Plaster system
- Coating system
- Weathertight concrete
- Masonry veneer

Module 5 – Flashings

- Required properties of flashing materials
- Acceptable flashing materials
- Fixings

Module 6 - Concrete Roofs and Decks

Module 7 - Slab-on-ground and Footings

Module 8 - Construction Moisture
